

# GDPR Contact Manager

**GDPR Contact Manager**, from SP Data Services, allows for the tracking of consent and removal of personal data using existing contact data in CRM and business specific databases.

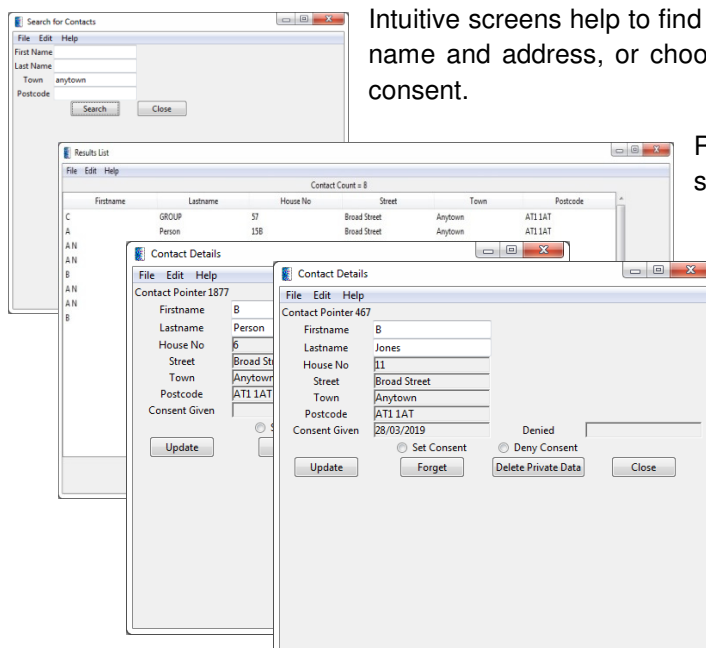

The **GDPR Contact Manager** front screen shows the current consent status for all contacts, either as a bar chart or a pie chart.

Contacts can be found based on their Consent state or using name and address searching.

Detailed screens allow for the management of consent and personal data for contacts.

A small database footprint is deployed for the implementation of **GDPR Contact Manager**. This allows for consent tracking and auditing of all changes to contact data.

Intuitive screens help to find contacts. Search on any combination of name and address, or choose to show all contacts with or without consent.

Results are presented in a scrollable and sortable list.

Multiple results can be displayed and multiple contacts can be maintained from the lists.

Detail screens allow for updates to contact names and/or addresses.

Options to:

- 'Forget' a contact.
- Remove all personal data.
- Set or deny consent.

Configurable 'anonymous' name, for 'forgotten' contacts.

## GDPR Contact Manager Key Features

- Integration with your existing contact relational database
- ODBC connection to relational databases, for example Oracle, MSSQL and MySQL.
- Recording of Consent Approval and Denial
- Anonymise contacts
- Removal of personal data
- Full auditing of data changes

## SP Data Services
